# I . Applications / Product Usage

**The following must be taken into consideration before use.**

1. The operating condition of the products shown in this catalog varies depending upon each application. Therefore, the product suitability must be judged by the designer of the hydraulic system and/or the person who finalizes the technical specifications of the machine after analysis and testing. The product specification shall be determined based on the latest catalog and technical documents. The system must be designed taking into account the possibility of machine failure to ensure that all safety, warning, and application requirements are met.
2. For the proper use of the products, descriptions given in the SAFETY PRECAUTIONS must be observed.
3. The technical information in this catalog represents typical characteristics and performance of the products as of the published date.
4. If the intended use of the products is included in the following, please consult with Kawasaki in advance.
  - (1) Use the product in the operating conditions or environments other than those described in the technical documents.
  - (2) Use the product in the nuclear sector, aviation sector, medical sector, and/or food sector.
  - (3) Use the product in applications which may cause substantial harm to others and their property, and especially in applications where ensuring safety is a requirement.
5. The information described in this catalog is subject to change without notice. For the latest information, please contact Kawasaki.

# II. Safety Precautions

**Before using the product, you MUST read this catalog and MUST fully understand how to use the product safely. To use the product safely, you MUST carefully read all Warnings and Cautions in this catalog.**

## 1. Cautions related to operation

-  **CAUTION**
  - Use the personal protective equipment to prevent injury when the product is in operation.
  -  **CAUTION**
    - Some components are heavy. Handle the product carefully not to hurt your hands and lower back.
  -  **CAUTION**
    - Do not step on, hit or drop , or apply strong force to the product, as these actions may cause operation failure, product damage, or oil leakage.
  -  **CAUTION**
    - Wipe off any oil on the product or the floor completely, as oil can create slippery conditions that may cause drop of the product and personal injury.

## 2. Warnings and cautions related to installation and removal of the product

-  **CAUTION**
  - Installation, removal, piping, and wiring must be done by a qualified technician.
  -  **WARNING**
    - Make sure that the hydraulic power unit is turned off and that the electric motor or engine has completely stopped before starting installation or removal. You must also check that the system pressure has dropped to zero.
  -  **WARNING**
    - Make sure that the power source is turned off before installing electric components to reduce the risk of electric shock.
  -  **CAUTION**
    - Clean the threads and the mounting surface to prevent damage or oil leakage. Inadequate cleaning may cause insufficient torque and broken seals.
  -  **CAUTION**
    - Use the designated bolts and fasten them with prescribed torque when installing the product. Use of undesigned bolts, and excessive or insufficient tightening torque may induce operation failure, damage, or oil leakage.

## 3. Warnings and cautions for operation

-  **DANGER**
  - Always equip the product with explosion or ignition protection if it is used in potentially explosive or combustible atmospheres.
-  **WARNING**
  - Shield rotary parts, such as the motor and pump shaft, to avoid injury.
-  **WARNING**
  - Stop operation immediately, and take proper measures when the abnormality such as unusual noise, oil leakage, and smoke is found. Continuing operation under such condition may bring about damage, a fire hazard, or injury.
-  **CAUTION**
  - Make sure that all pipes, hoses, and connecting points with pipes or hoses, are correctly connected and tightened before starting operation.
-  **CAUTION**
  - Use the product under the operating conditions and limitations described in the catalog, drawings, and specification sheets.
-  **CAUTION**
  - Do not touch the product in operation. to reduce the risk of skin burn.
-  **CAUTION**
  - Use the proper hydraulic oil and maintain the filtration at the recommended level to prevent premature wear and damage.

## 4. Cautions related to maintenance

-  **CAUTION**
  - Never modify the product without approval from Kawasaki.
-  **CAUTION**
  - Disassembly of the product may void the warranty.
-  **CAUTION**
  - Keep the product clean and dry when storing or transporting.
-  **CAUTION**
  - The seals may need to be replaced if the product has been stored for an extended period of time.
-  **WARNING**
  - Making adjustments of this product will result in the warranty being null and void.

# III. Handling Precautions

## 1. Operating Fluid and Temperature Range

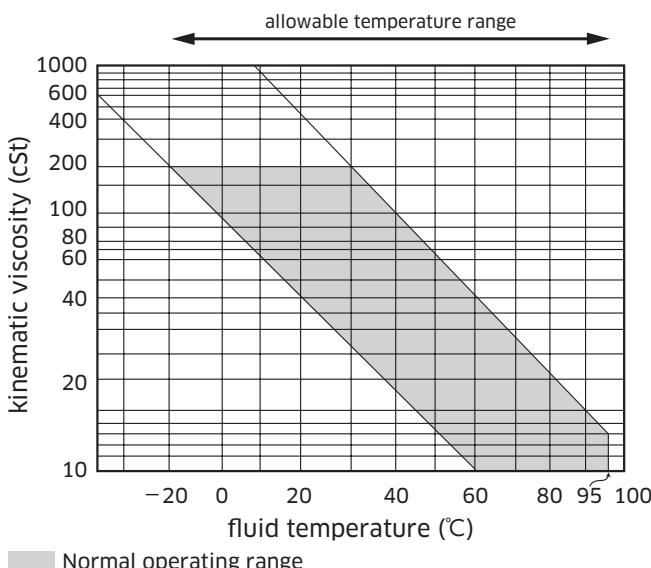

### 1) Operating fluid

Values shown in this catalog are based upon using mineral oil based anti-wear hydraulic fluid. To ensure optimal performance use of mineral oil based anti-wear hydraulic fluid is recommended.

### 2) Viscosity and temperature range

To minimize both oil and seal deterioration, a maximum operating temperature of 60°C should be considered. Please note that the regulator may become slow to respond when operating at low temperatures (below 20°C) in extreme cold environments. At such low temperature it is strongly suggested that a warm up cycle is introduced until an operating temperature of 20°C is achieved.

	Normal operating range	Allowable range
Viscosity [mm <sup>2</sup> /s(cSt)]	10 to 200	10 to 1,000
Fluid temperature [°C (°F)]	−20 to +95 (−4 to +203)	

## 2. Filtration and Contamination Control

### 1) Filtration of working oil

The most important means to prevent premature damage to the pump and associated equipment and to extend its working life, is to ensure that hydraulic fluid contamination control of the system is working effectively.

This begins by ensuring that at the time of installation that all piping, tanks etc. are rigorously cleaned in a sanitary way. Flushing should be provided using an off line filtration system and after flushing the filter elements should be replaced.

A full flow return line filter of 10 micron nominal should be utilised to prevent contaminant ingress from the external environment, a 5 to 10 micron filter with the tank's breather is also recommended.

### 2) Suggested acceptable contamination level

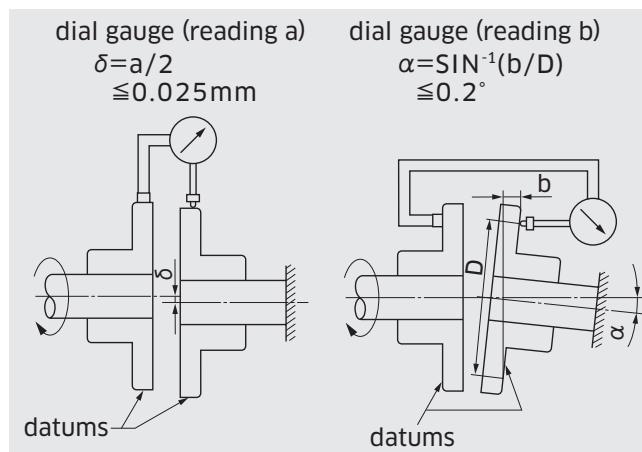

The relationship between contamination level and pump life is very difficult to predict as it depends on the type and nature of the contaminant present in the system. Sand or Silica in particular, due to its abrasive nature, does significantly reduce the expected life of a pump. Based on the precondition that there is no significant presence of Silica type substances then a minimum Cleanliness level of -/18/15 ISO 4406 or SAE AS 4059E Table 1 Class 9 (NAS 1638 Class 9).

## III. Handling Precautions

### 3. Drive Shaft Coupling

Alignment between the prime mover and the pump shaft should be within 0.05 mm TIR\*. In case the pump is directly coupled to the engine flywheel, use a flexible coupling.

\*TIR = Total Indicator Reading

## 4. Oil Filling and Air Bleeding

### 1) Pump case filling

Be sure to fill the pump casing with oil through the drain port, filling only the suction line with oil is totally in-sufficient. The pump contains bearings and high-speed sliding parts including pistons with shoes and a spherical bush that need to be continuously lubricated. Part seizure or total premature failure will occur very quickly if this procedure is not rigidly followed.

### 2) Air bleeding

Run the pump unloaded for a period to ensure that all residual air within the system is released.

### 3) Long term out of usage

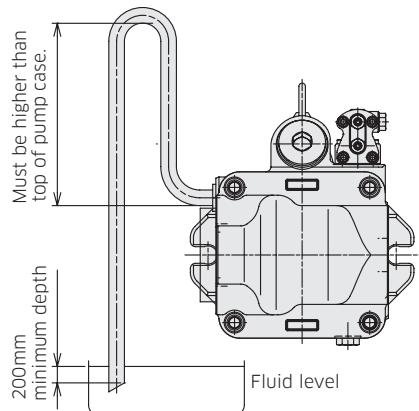

It is undesirable to leave the pump out of use for a long period e.g. a year or more. In such a situation it is recommended that the pump is run for a short period on a more frequent basis even if it is just unloaded. With regard to a pump held in storage then rotating the shaft on a frequent basis is sufficient. If the pump is left out for more than the suggested time it will require a service inspection.

## III. Handling Precautions

### 5. Drain Piping

#### 1) Installation of drain line

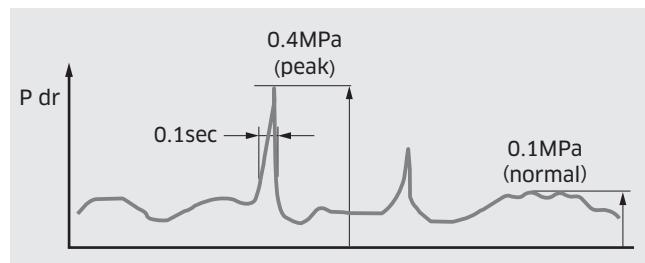

It is the preferred option to mount the pump with the case drain piping initially rising above the pump before continuing to the tank. Do not connect the drain line to the inlet line.

#### Cautions

- A)** Inlet and drain pipes must be immersed by 200 mm minimum from the lowest level under operating conditions.
- B)** Height from the oil level to the centre of the shaft must be within 1 meter maximum.
- C)** The oil in the pump case must be refilled when the pump has not been operated for one month or longer.

The uppermost drain port should be used and the drain piping must be larger in size than the drain port to minimise pressure in the pump case. The pump case pressure must not exceed 0.1 MPa as shown in the illustration below. (Peak pressure must never exceed 0.4 MPa.)

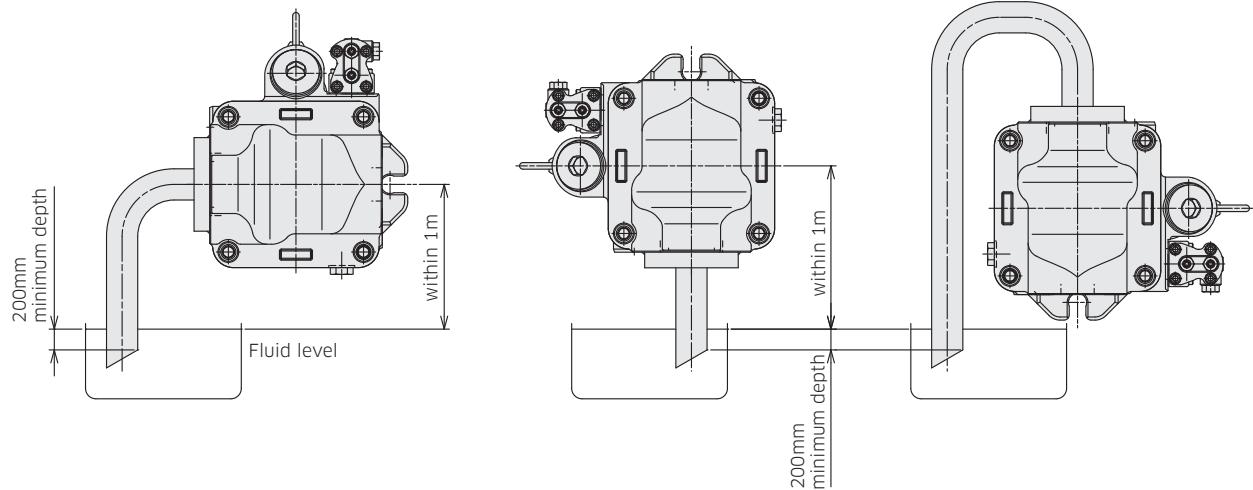

#### 2) Size of drain hose or drain pipe

The internal bore size of the drain hose or drain pipe must be larger than that of the drain port. Arrange the drain line as short as possible.

### III. Handling Precautions

#### 6. Mounting the Pump Above the Tank

Suction line

#### 7. Shaft Loading and Bearing Life

Although K3VLS pumps are equipped with bearings that can accept some external thrust and radial forces, application of such loads will affect bearing life. Depending on the load magnitude , the load position, and the load orientation, bearing life may be significantly reduced.

# IV. Conversion Factors, Formula and Definition

## ◆ Conversion Factors

	Formula	Note
Displacement	$1 \text{ cm}^3 = 0.061 \text{ in}^3$	
Pressure	$1 \text{ MPa} = 145 \text{ psi}$	
Flow	$1 \text{ L/min} = 0.264 \text{ gpm}$	US gallon
Torque	$1 \text{ Nm} = 0.74 \text{ lb ft}$	
Power	$1 \text{ kW} = 1.341 \text{ hp}$	
Weight	$1 \text{ kg} = 2.205 \text{ lb}$	

## ◆ Formula

	Metric system		Imperial system	
<b>Output flow</b>	$Q = q \times N \times \eta_v / 1000$	L/min	$Q = q \times N \times \eta_v / 231$	gal/min
<b>Input torque</b>	$T = q \times \Delta P / 2\pi / \eta_m$	Nm	$T = q \times \Delta P / 24\pi / \eta_m$	lbf ft
<b>Input power</b>	$L = T \times N / 9550 = Q \times \Delta P / 60 / \eta_t$	kW	$L = T \times N / 5252 = Q \times \Delta P / 1714 / \eta_t$	hp

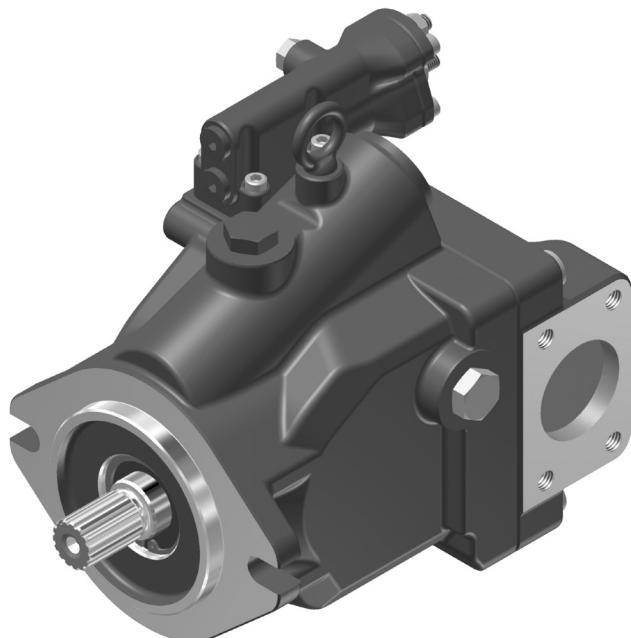

## ◆ Definition

$q$	= Pump displacement / rev.	$\text{cm}^3 (\text{in}^3)$
$L$	= Input power	kW (hp)
$N$	= Speed	$\text{min}^{-1} (\text{rpm})$
$\Delta P$	= $P_d - P_s$	MPa (psi)
$P_d$	= Pump delivery pressure	MPa (psi)
$P_s$	= Pump suction pressure	MPa (psi)
$P_L$	= Load sensing pressure	MPa (psi)
$P_{dr}$	= Pump case pressure	MPa (psi)
$P_f$	= Power shift pressure	MPa (psi)
$P_{sv}$	= Servo pressure	MPa (psi)
$T$	= Input torque	$\text{Nm (lbf-ft)}$
$T_{max}$	= Maximum input torque	$\text{Nm (lbf-ft)}$
$\eta_v$	= Pump volumetric efficiency	
$\eta_m$	= Pump mechanical efficiency	
$\eta_t$	= Pump total efficiency	

## MEMO

# K3VLS Series

## Swash Plate Type Axial Piston Pump

### ■ Specifications

Size : 50, 65, 85, 105, 150

Rated Pressure : 28 MPa

Peak Pressure : 35 MPa

### ■ General Descriptions

The K3VLS are variable displacement axial piston pumps of swash plate design, suitable for use in mobile applications and industrial vehicles with medium pressure hydraulic systems.

The K3VLS pumps enable flexible configuration in a wide range of applications with their compact size and light weight design.

The K3VLS series pumps are available in size (rated displacement) ranging from 50 to 150 cm<sup>3</sup>/rev with various control options, such as load sensing, pressure cut-off, and horsepower controls.

### ■ Features

- Variable axial piston pump of swash plate design in open circuits
- High overall efficiency
- Compact size
- Light weight
- Excellent reliability
- Numerous control options
- High stability
- Highly responsive controls

\* (Note) Maximum pressure must be reduced to operate within allowable maximum input torque as below when the torque limit control is not used.

SAE BB Key K3VLS65: 22 MPa

For above options, if 28 MPa is needed, use the torque limit control.(Power shift H1 & H2 not available)

## 2. Technical Information

### 2-2 Functional Description of Regulator

#### ◆ Load Sensing and Pressure Cut-off (Ordering Code [9]: L0 / L1)

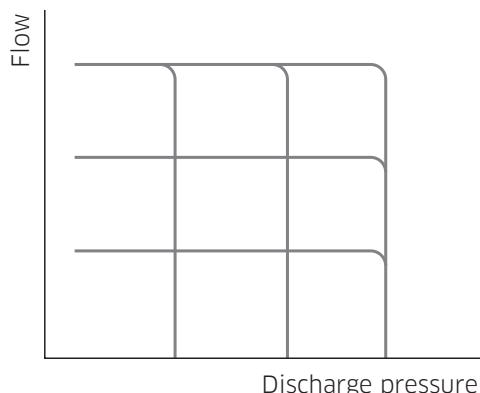

This regulator has function of flow and pressure control (i.e. load sensing control and pressure cut-off control.)

To control flow a variable orifice is used. (A variable orifice is not included in the pump and shall be prepared separately.) Pump displacement is controlled to maintain the differential pressure across the orifice constant. The flow is controlled to a required flow regardless of pump delivery pressure. In addition, there is a pressure cut off function incorporated into the control. The pressure cut-off function overrides the flow control function.

L0 control: with a bleed off orifice

L1 control: without a bleed off orifice

Releasing the pressure at port PL results in standby condition, which provides zero flow at unloading condition. The unloading pressure is typically 0.1 to 0.2 MPa higher than differential pressure setting.

**Flow, Pressure control curve**

#### ■ Differential pressure setting

Standard setting at factory : 1.5 +0.3/-0.2 MPa

Load sensing differential pressure range can be selected from two setting ranges.

unit: MPa

Code	Adjustment range	Adjustment sensitivity
A	1.0 to 3.0	1.3 / turn
C	1.5 to 4.0	2.5 / turn

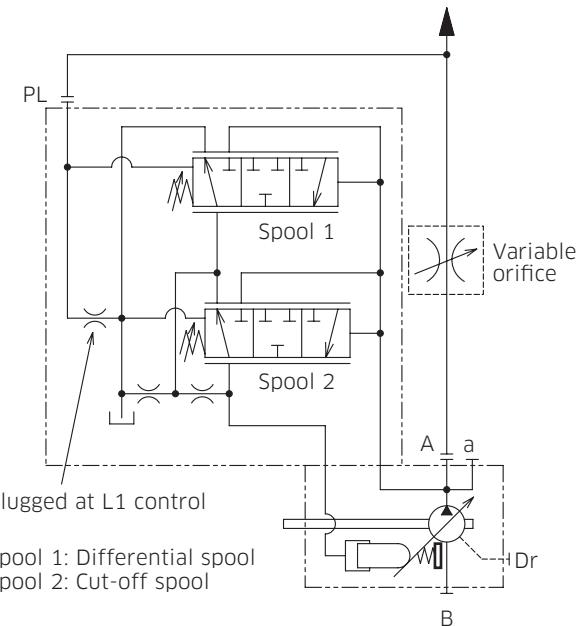

#### ■ Pressure cut-off setting

Standard setting at factory : 28 0/-1.5 MPa

Pressure cut -off setting range is from 5 MPa to 28 MPa.

unit: MPa

Adjustment range	Adjustment sensitivity
5.0 to 28.0	8.0 / turn

**Hydraulic circuit**

## 2. Technical Information

### 2-2 Functional Description of Regulator

#### ◆ Electric Inverse Proportional Pressure Control -Voltage:24V, Deutsch Connector (Ordering Code [9]: PR2)

This regulator is Electro-hydraulic pressure control type of regulator. A current is input from the controller to the solenoid of the regulator, and the pressure is controlled by the inverse proportional solenoid valve. Since the regulator tries maintaining the pressure which is set by the valve, the pump discharge is controlled according to the load of the actuator. Thus, the pump supplies only the amount of hydraulic oil required by the actuator. Even if the input current to the solenoid becomes zero at the electric failure of the machine, the pressure set will be maximum, and the pump displacement will be also maximum, so it functions as electric fail-safe.

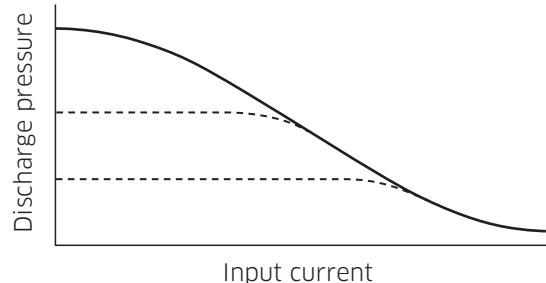

The pressure of cut-off valve can be set between 28MPa and 10MPa. The control effective range of the solenoid is decided by the cut-off valve setting. (e.g. in case the cut-off setting is 20MPa, the control range is 230mA - 500mA.)

#### ■ Recommended dither condition for the input current

Dither frequency: 200 Hz

Dither amplitude: 200 mA<sub>p-p</sub>

	PR2
Rated current [mA]	700
Coil resistance (at 20°C) [Ω]	26.2
Power consumption (at cold) [W]	22
Connector type	Ladd Distribution DT04-2P
Water proof	IP69K

**Input current - Discharge pressure curve**

Max. pressure setting	Input current control range
28 MPa	120 - 500 mA
26 MPa	150 - 500 mA
24 MPa	180 - 500 mA
22 MPa	210 - 500 mA
20 MPa	230 - 500 mA
18 MPa	250 - 500 mA
16 MPa	275 - 500 mA
14 MPa	300 - 500 mA
12 MPa	325 - 500 mA
10 MPa	350 - 500 mA

**Control effective range**

**Hydraulic circuit**

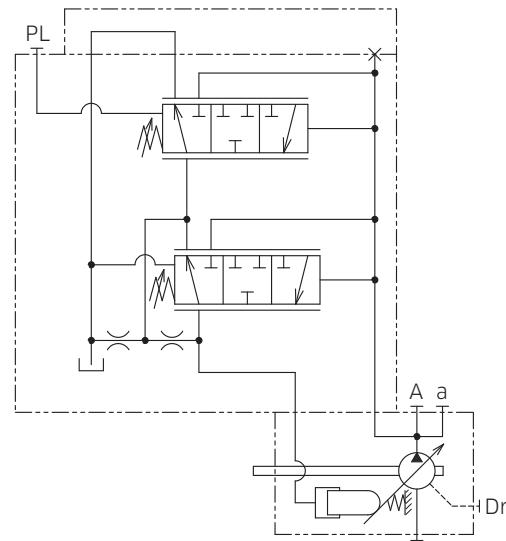

## 2. Technical Information

### 2-2 Functional Description of Regulator

◆ w/o Any Additional Control,  
w/cover plate for Torque Limit  
(Ordering Code [11]: 00)

When the "00" option is selected in section 11 of the model code the K3VLS pump is supplied as a torque limit ready pump. The pump has a blanking plate fitted instead of the torque limiter. This offers better flexibility to configure the pump as required.

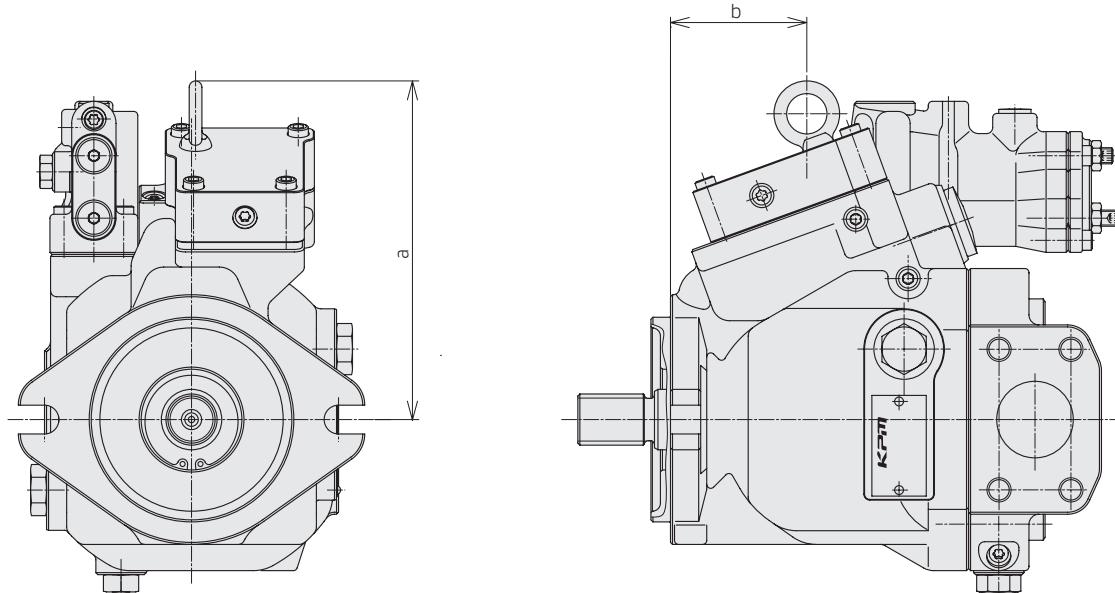

The pump as ordered will function as a load sense or pressure compensated pump depending on your selection of flow control in section 9 of the model code. If the torque limit blanking cover is then replaced with a torque limit regulator the pump has the torque limit control functionality. Note that the torque limit regulator would need to be set.

## 2. Technical Information

## 2. Technical Information

### 2-2 Functional Description of Regulator

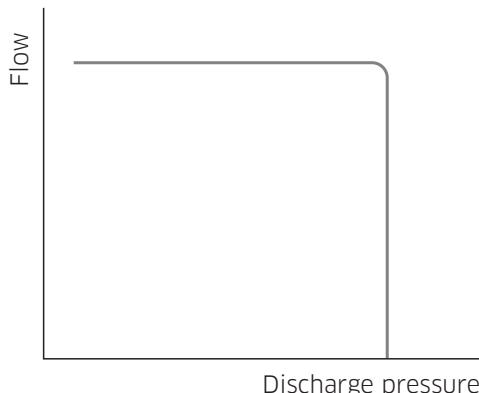

#### ◆ Pressure Cut-off (Ordering Code [9]: P0)

This regulator has function of pressure control. As discharge pressure rises to the cut-off setting, the pump displacement is reduced to prevent the discharge pressure from exceeding and keep the set pressure. It is imperative that a safety relief valve be installed in the system.

By connecting the  $P_c$  port to a remote pressure control relief valve, variable pump pressure control can be achieved.

The remote pressure control relief valve is to be set to 1.5 MPa below to the required system pressure.

The remote control relief valve is out of scope of supply.

**Flow, Pressure control curve**

#### ■ Differential pressure setting

Standard setting at factory : 1.5 +0.3/-0.2 MPa

Load sensing differential pressure range can be selected from two setting ranges.

unit: MPa

Code	Adjustment range	Adjustment sensitivity
A	1.0 to 3.0	1.3 / turn
C	1.5 to 4.0	2.5 / turn

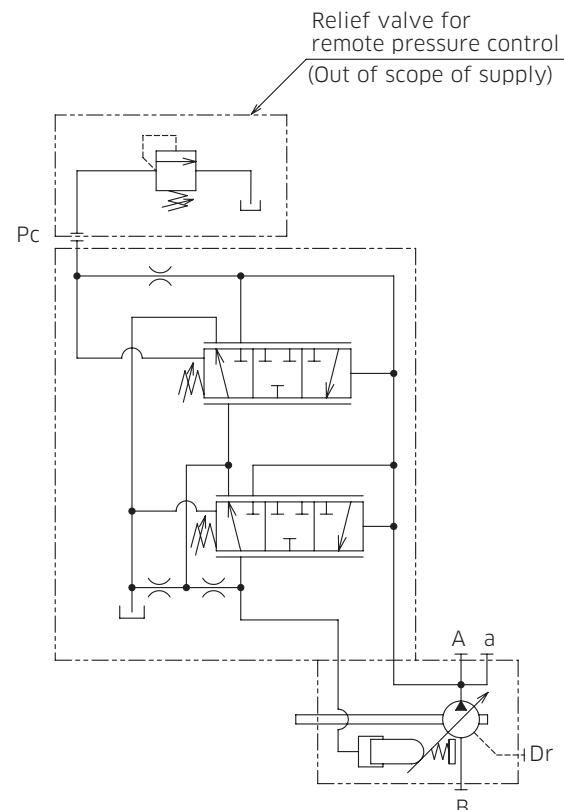

#### ■ Pressure cut-off setting

Standard setting at factory : 28 0/-1.5 MPa

Pressure cut -off setting range is from 5 MPa to 28 MPa.

unit: MPa

Adjustment range	Adjustment sensitivity
5.0 to 28.0	8.0 / turn

**Hydraulic circuit**

## 2. Technical Information

### 2-2 Functional Description of Regulator

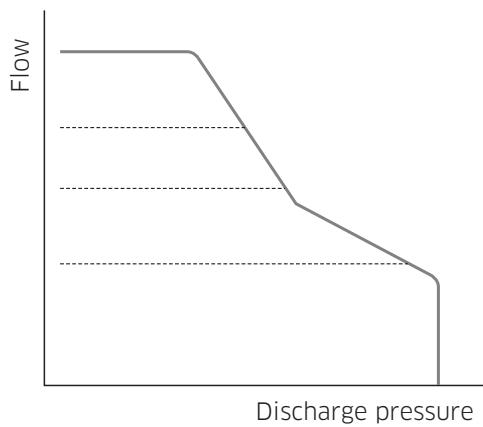

#### ◆ Torque Limiter

(Ordering Code [11]: A)

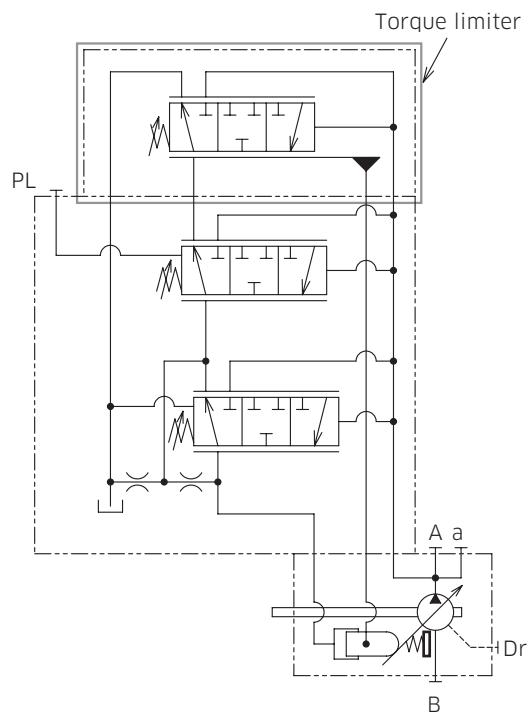

L0/L1 control functions as previously noted. In response to a rise in delivery pressure the swash plate angle is decreased, restricting the input torque. This regulator prevents excessive load against the prime mover.

The torque limiter is comprised of two springs that oppose the spool force generated by the system pressure. By turning the adjustment screws, the appropriate input torque limit can be set.

Torque limiter control setting is shown in the attached table, and the torque limiter can be adjusted by the torque value of the table. Refer to the instruction manual for adjustment.

**Torque limiter control curve**

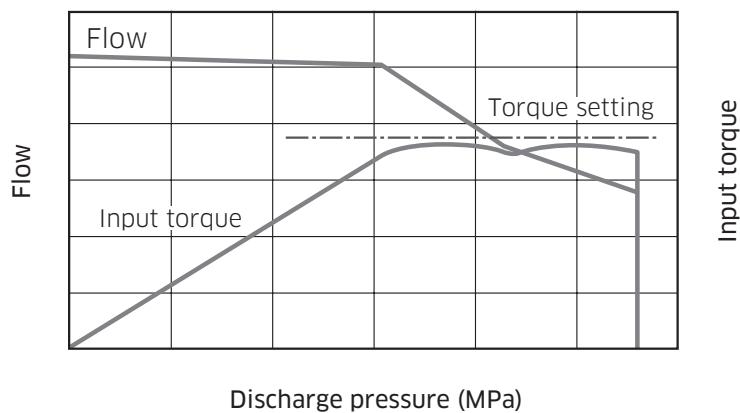

**Hydraulic circuit**

K3VLS150	470	400	335	265	-

Unit : Nm

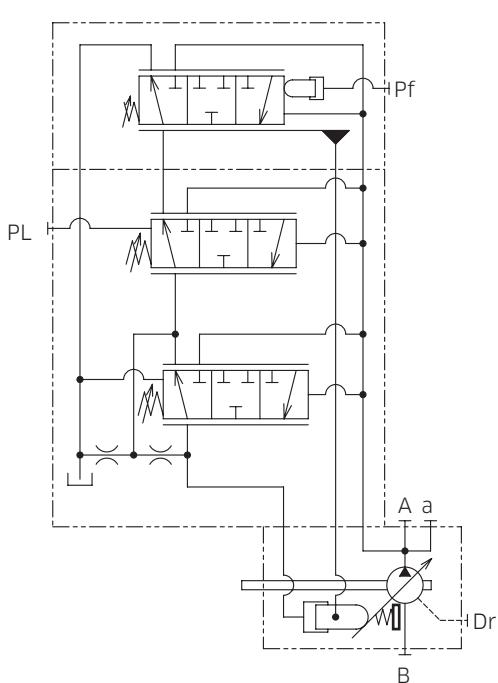

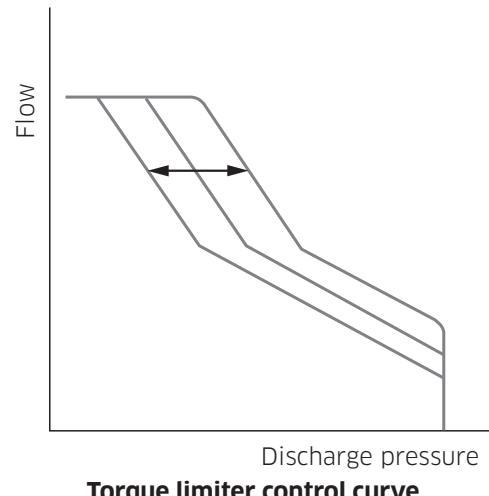

## 2. Technical Information

### 2-2 Functional Description of Regulator

#### ◆ Torque Limiter with Power Shift (Ordering Code [11]: B, C2, C3)

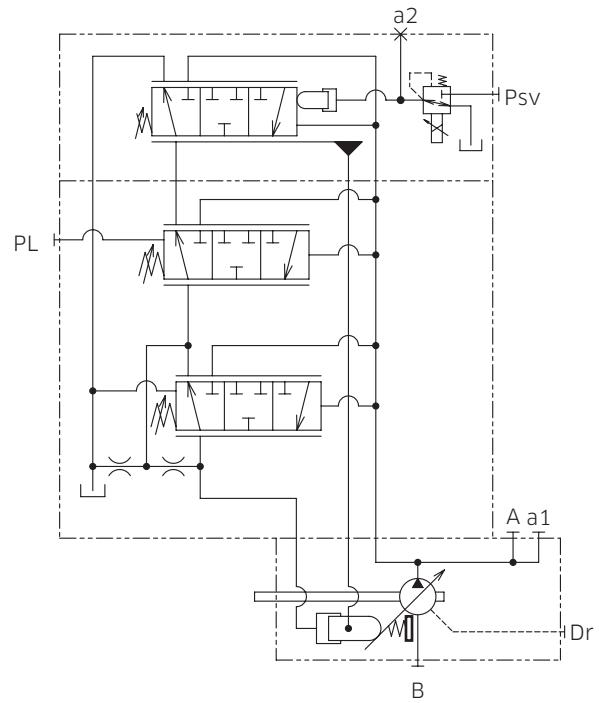

Torque limiter is available with variable torque limit control. Torque limit setting can be varied by the external pilot pressure supply (code "B") or the integrated electric proportional control valve with the external servo pressure supply (code "C"). Code "B" and "C" enable to shift the power control setting as shown in the following torque limiter control characteristic curve.

See the table (page 19) for torque setting according to the external pilot pressure or the input current to the integrated proportional valve. Required servo pressure to the solenoid is 3.5 to 4.5 MPa.

External pilot pressure (Pf) range: 0 to 4.0 MPa

**Hydraulic circuit, code B**

Required servo pressure (Psv): 3.5 to 4.5 MPa

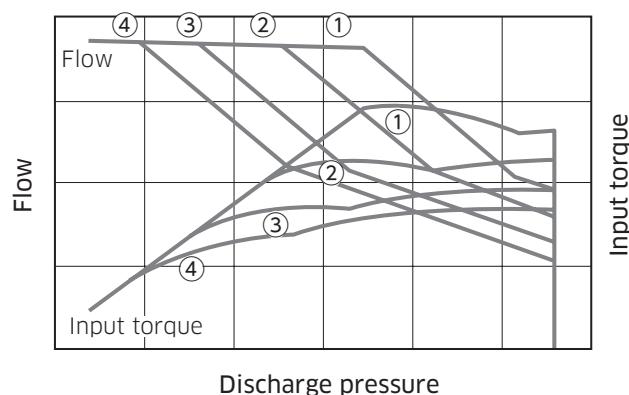

**Hydraulic circuit, code C**

	④ 3.30	690	1,370	385	330	275	225	

Input torque in the above table is planned value and for reference.

Displacement ratio (%) = Displacement / Max. Displacement

## 2. Technical Information

### 2-2 Functional Description of Regulator

#### ◆ Electric Displacement Control (Positive Control)

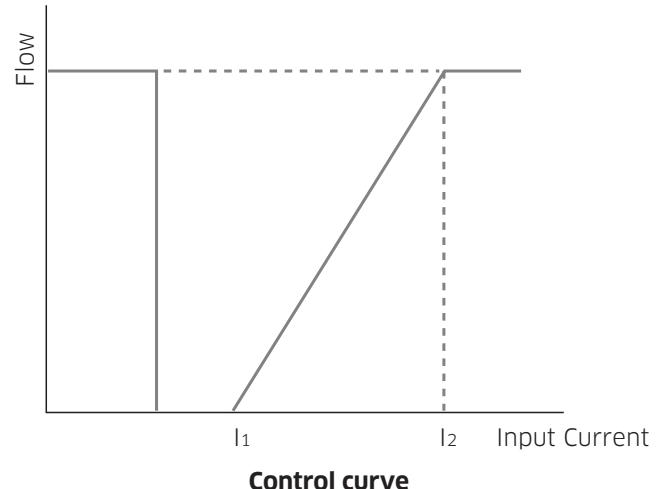

- With Fail-safe Function (Ordering Code[11]: E2, E3)
- Without Fail-safe Function (Ordering Code[11]: F2, F3)

The electric displacement control enables the pump displacement to be changed according to the change of input current to the solenoid. The pump displacement can be adjusted in proportion to the input current between the input current of  $I_1$  and  $I_2$  (refer to control curve).

With fail-safe function, at loss of input current in such case of brakage of electric wires, the pump displacement becomes maximum automatically. Even under this condition the load sensing and pressure cut-off control can be operated.

The fail-safe function is designed only for usage in short period for emergency. Necessary repair is to be made in the soonest opportunity.

For the hydraulic circuit refer to page 26.

#### ■ Note for pumps with fail-safe

##### ■ Note for start up

Due to its structure, the electric displacement control requires larger input current than  $I_2$  at start up, then normal proportional control can be achieved between  $I_1$  and  $I_2$ .

##### ■ Minimum operating pressure

With fail-safe function, in order to ensure safety and repeatability of control the minimum operating pressure of 5 MPa is to be secured. This avoids switching the pump to fail-safe mode unexpectedly.

##### ■ Input current ramp time requirement

With fail-safe function (Ordering code: E2, E3), ramp time of 200 msec or larger is to be secured.

Ordering code	$I_1$	$I_2$	Unit: mA
E2, F2	200	600	
E3, F3	400	1,200	

##### ■ Recommended dither condition for the input current

Dither frequency: 150 Hz

Dither amplitude: for E2, F2 200 mA<sub>p-p</sub>  
for E3, F3 400 mA<sub>p-p</sub>

	E2, F2	E3, F3
Rated current [mA]	700	1,400
Coil resistance (at 20°C) [ $\Omega$ ]	22.6	5.7
Power consumption (at 20°C) [W]	11.2	11.2
Connector type	Ladd Distribution DT04-2P	
Water proof	IP67

#### Through Drive SAE B

Ordering Code "5. Through Drive and Porting": B

Involute spline according to ANSI B92.1a, 30° pressure angle, flat root, side fit.

### 3. Dimensions

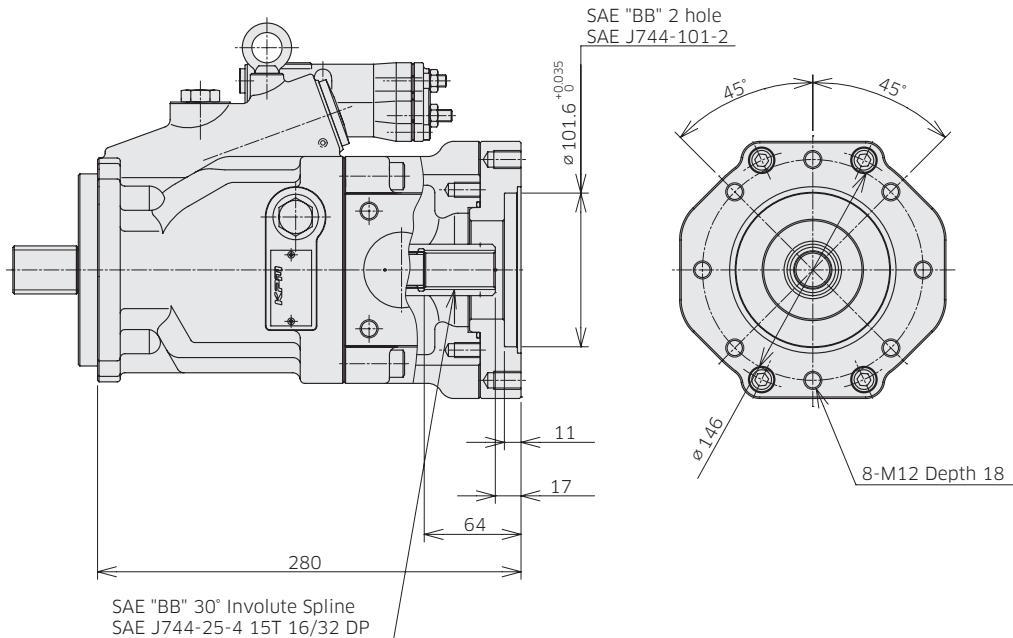

## 3-1 Installation Dimensions

\* Dimensions in mm.

### ◆ K3VLS85 Through Drive Options

#### Through Drive SAE BB

Ordering Code "5. Through Drive and Porting": BB

#### Through Drive SAE C

Ordering Code "5. Through Drive and Porting": C

Involute spline according to ANSI B92.1a, 30° pressure angle, flat root, side fit.

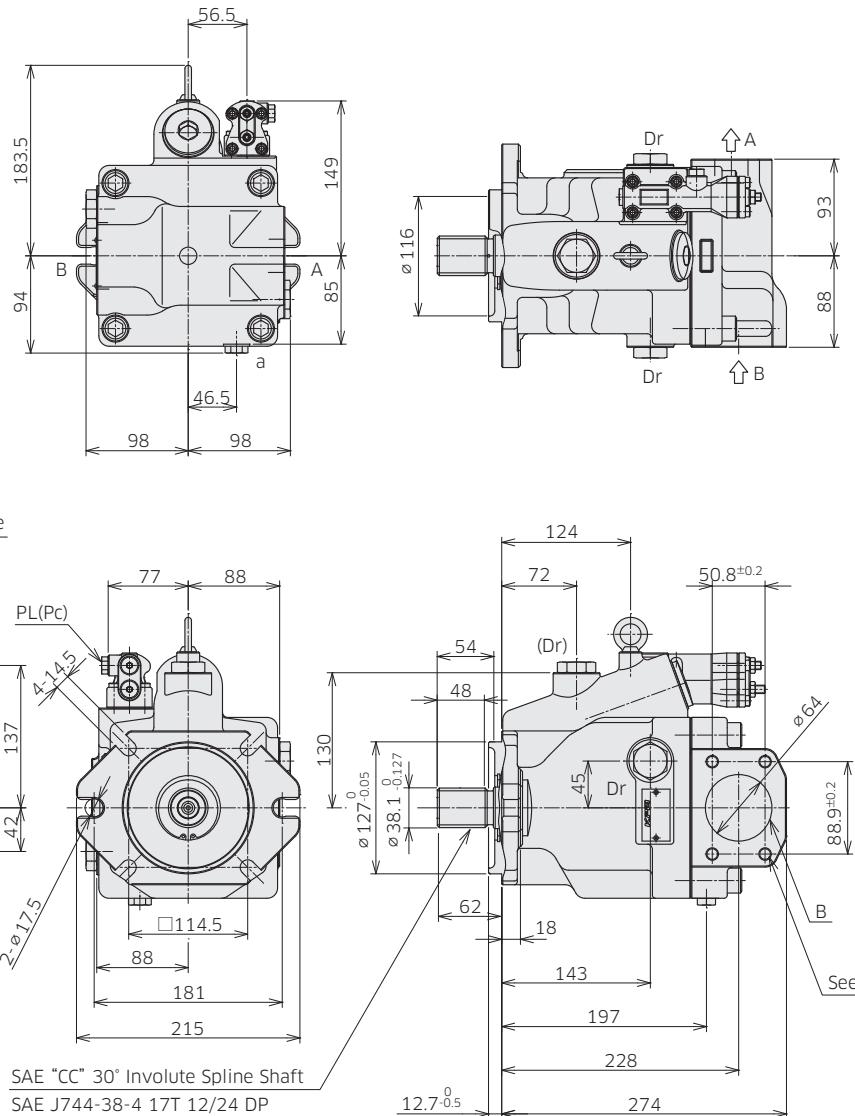

### 3. Dimensions

## 3-1 Installation Dimensions

\* Dimensions in mm.

### ◆ K3VLS105 with Cut-off / Load sense Control, Side Port (Clockwise Rotation)

Model Code : K3VLS 105 - 1 0 R CC \* - L0 A  
               : K3VLS 105 - 1 0 R CC \* - L1 A  
               : K3VLS 105 - 1 0 R CC \* - P0 A

Involute spline according to ANSI B92.1a, 30° pressure angle, flat root, side fit.

### 3. Dimensions

## 3-1 Installation Dimensions

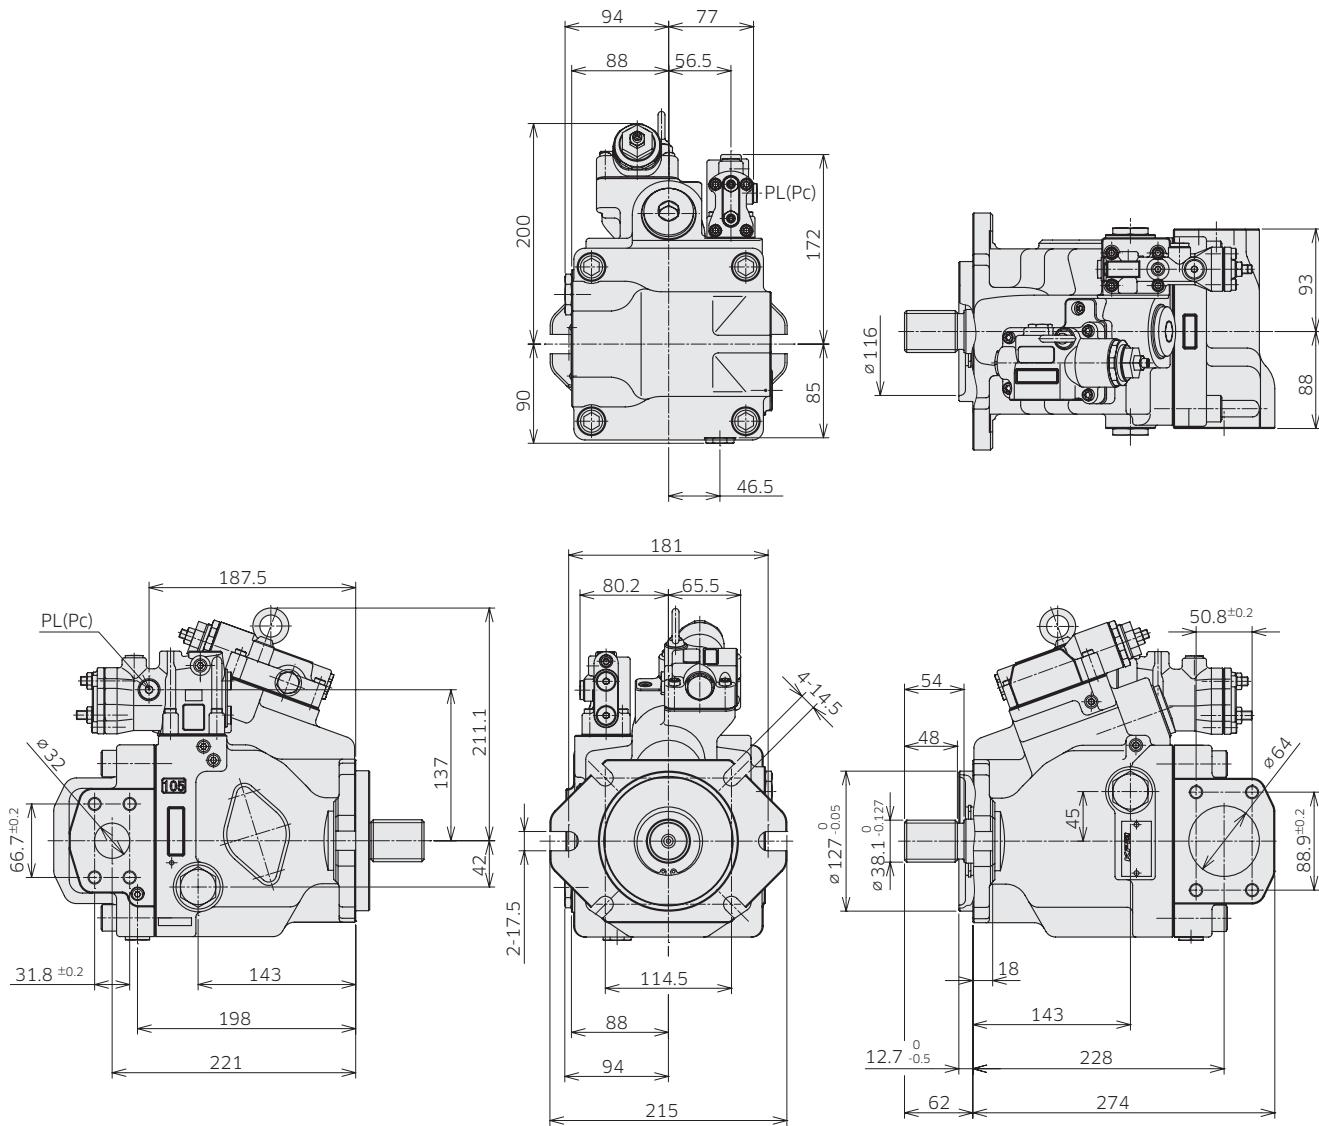

\* Dimensions in mm.

### ◆ K3VLS105 Torque Limit Control, Side Port (Clockwise Rotation)

Model Code : K3VLS 105 - 1 0 R CC \* - L0 A A

: K3VLS 105 - 1 0 R CC \* - L1 A A

: K3VLS 105 - 1 0 R CC \* - P0 A A

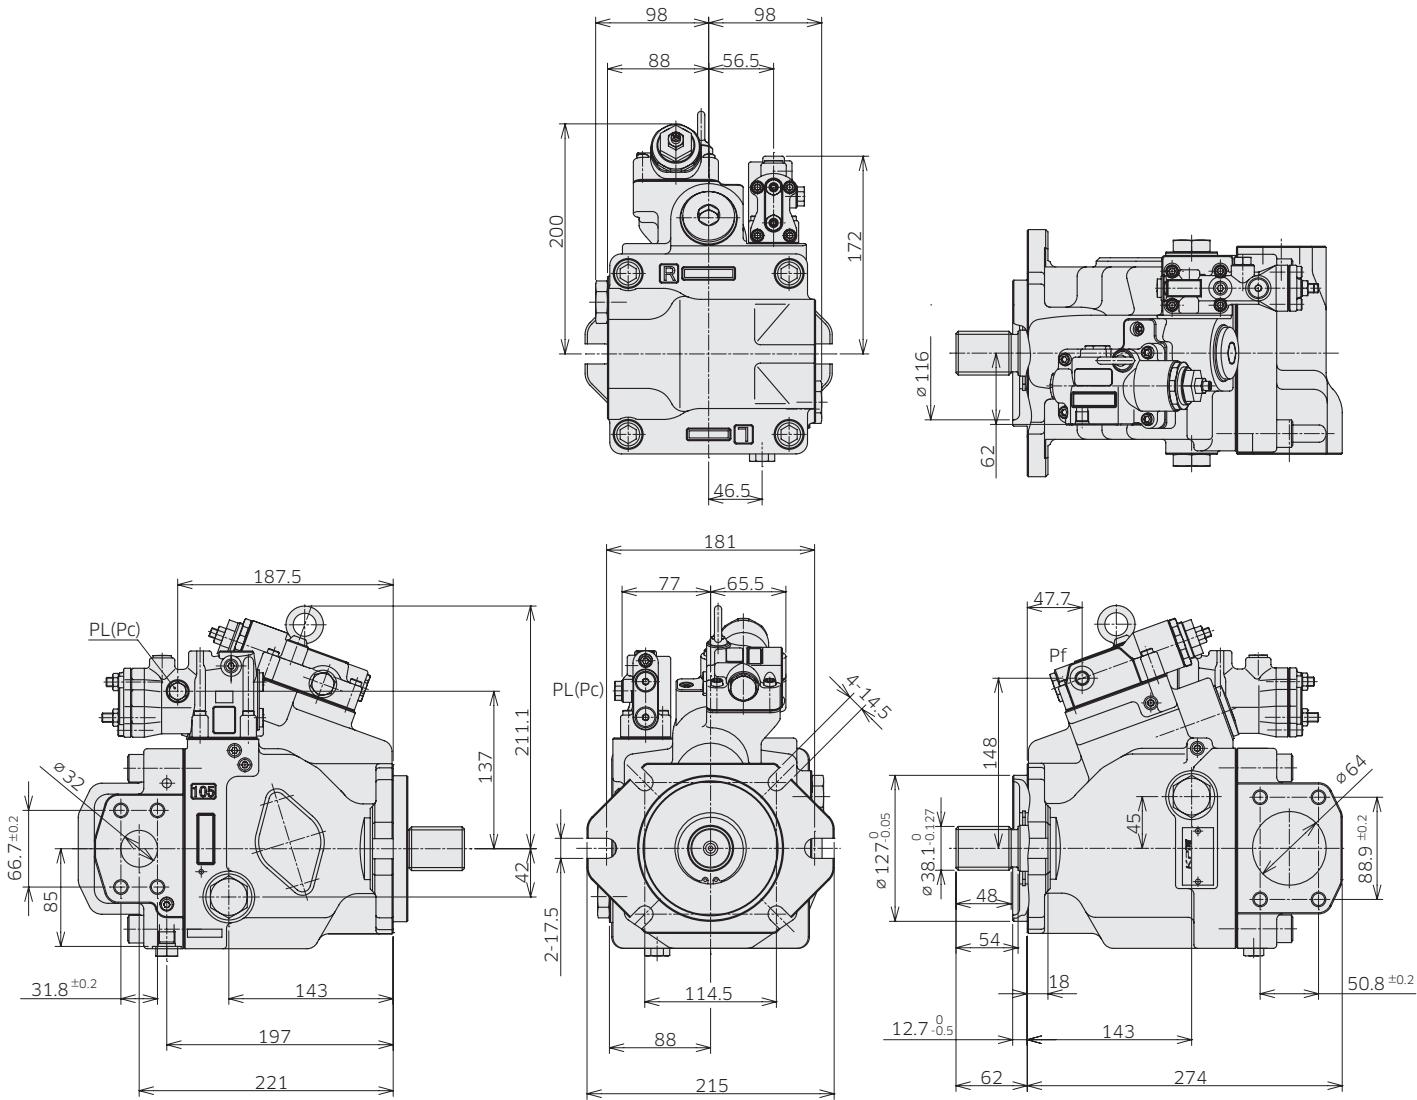

### 3. Dimensions

## 3-1 Installation Dimensions

\* Dimensions in mm.

### ◆ K3VLS105 Torque Limit with Power Shift Control, Side Port (Clockwise Rotation)

Model Code : K3VLS 105 - 1 0 R CC \* - L0 A B  
               : K3VLS 105 - 1 0 R CC \* - L1 A B  
               : K3VLS 105 - 1 0 R CC \* - P0 A B

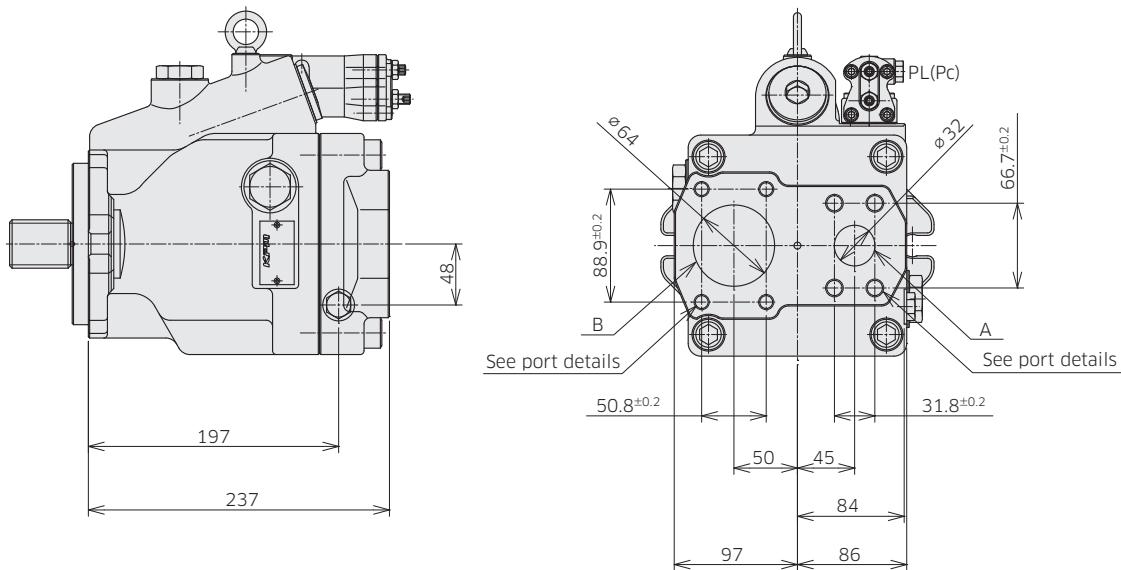

### 3. Dimensions

## 3-1 Installation Dimensions

\* Dimensions in mm.

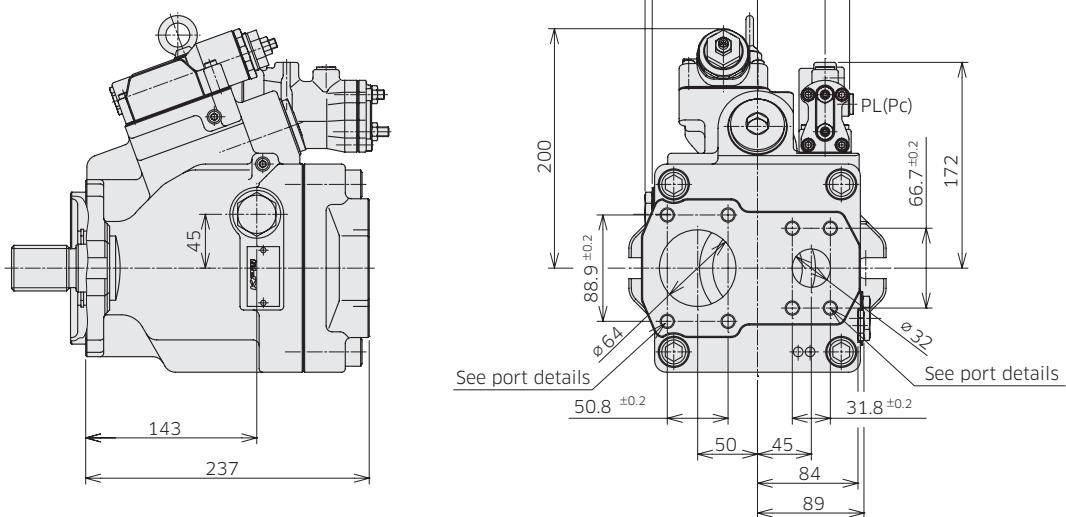

### ◆ K3VLS105 Rear Port (Clockwise Rotation)

Model Code : K3VLS 105 - 1 R R CC \* - L0 A  
: K3VLS 105 - 1 R R CC \* - L1 A  
: K3VLS 105 - 1 R R CC \* - PO A

### ◆ K3VLS105 Torque Limit Control, Rear Port (Clockwise Rotation)

Model Code : K3VLS 105 - 1 R R CC \* - L0 A A  
: K3VLS 105 - 1 R R CC \* - L1 A A  
: K3VLS 105 - 1 R R CC \* - PO A A

## 3-2 Installation of Auxiliary Pumps

### ■ Allowable mass moment for combination pump

K3VLS series can consist of multiple pumps using through drive mounting. The second pump can be attached up to the same size of the first pump. The table below shows the maximum allowable mass moment to the mounting flange of the first pump under the dynamic acceleration of 10G. The moment can be calculated by the formula shown below.

	K3VLS50		K3VLS65		K3VLS85		K3VLS105		K3VLS150	
	SAE B mount	SAE B mount	SAE C mount	SAE C-2 mount	SAE C-4 mount	SAE C-2 mount	SAE C-4 mount	SAE C mount	SAE D mount	
Allowable mass moment Tm (Nm) (dynamic acceleration of 10G)	180	210	330	280	410	280	410	500	680	

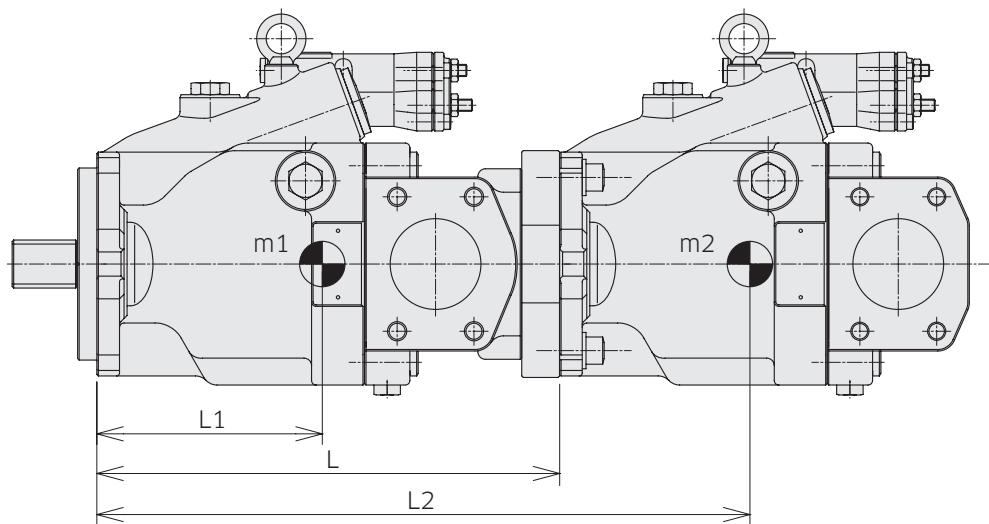

### ■ Calculation formula for mass moment

$$T_m = (m_1 \times L_1 + m_2 \times L_2 + m_3 \times L_3 + \dots) \times 1 / 102$$

$m_1, m_2, m_3 \dots$  : Weight of pump [kg]

$L_1, L_2, L_3 \dots$  : Center of gravity [mm]

See next page for values.

### 3. Dimensions

## 3-2 Installation of Auxiliary Pumps

■ Values for calculation of mass moment

Through drive size ported	Length, weight		50	65 SAE B mount	65 SAE C mount	85	105	150 SAE C mount	150 SAE D mount
Without through drive, side ported	Total length L (mm)		214	239	239	271	274	331	301
	Center of gravity L1 (from mounting face: mm)		107	117	113	126	131	166	139
	Weight (kg)	with torque limiter	24	28	29	34	40	57	55
		without torque limiter	21	25	26	31	37	54	52
Without through drive, rear ported	Total length L (mm)		188	207	207	232	237	300	270
	Center of gravity L1 (from mounting face: mm)		101	111	108	120	123	161	134
